

Changing Text Formatting with Styles

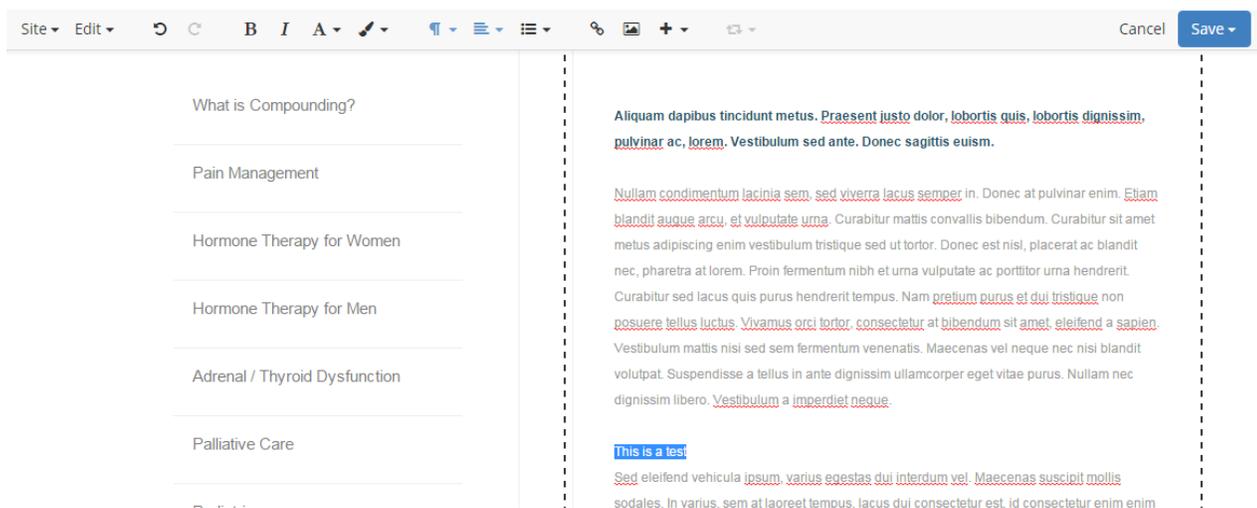

Depending upon the design, some websites will have preformatted styles. Styles can provide a special look to text which may include its size, color, the amount of space above or below the text, forced upper case, and more. This can allow you to create a prebuilt stylized heading just by typing the text and clicking on the desired style.

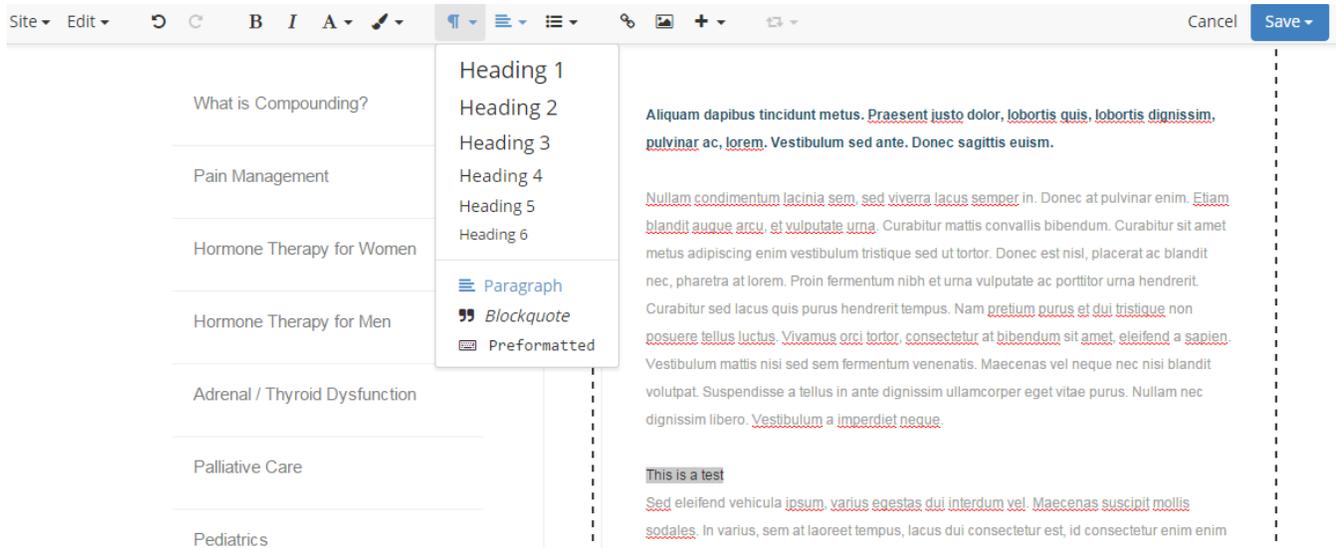

Click on the editing icon for the area where you wish to change the content or just select within the content.

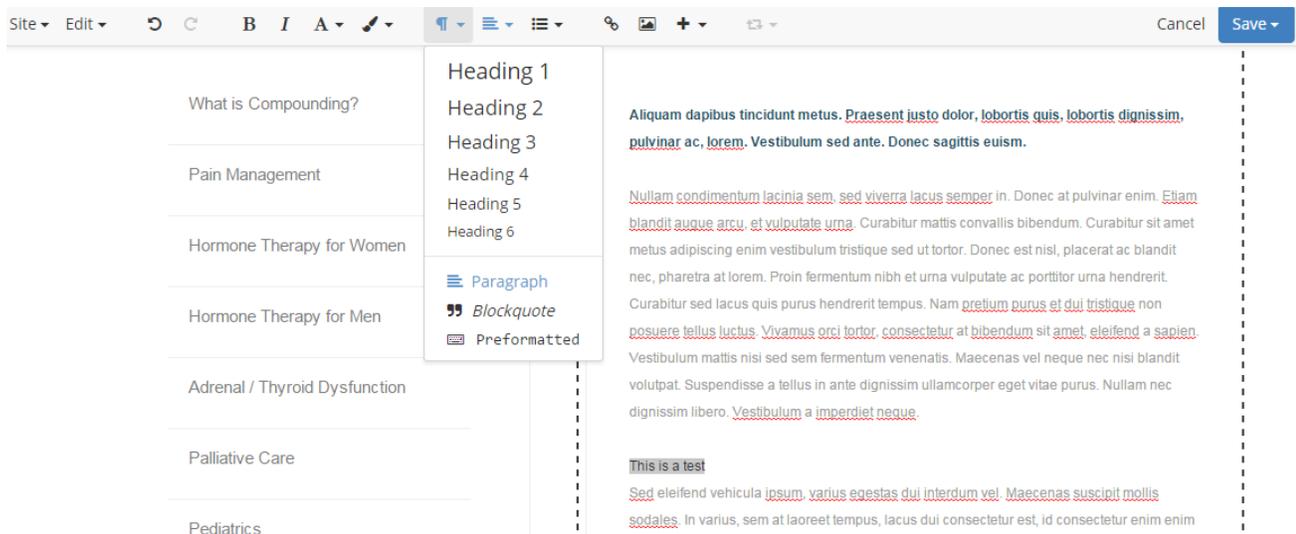

Type a line of text (to which you want to add a style) in your content as shown below. Then, click and drag across that text to highlight it.

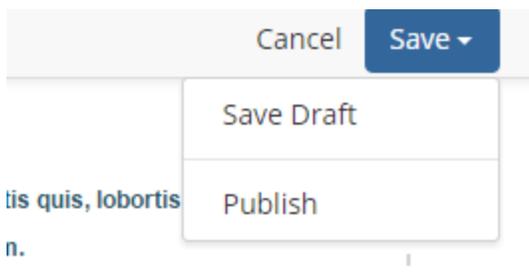

Select a style from the menu shown below to change the look of the text to match the example.

The preview of the page should reflect your changes.

Once you have completed your work on the page, be sure to remember to click “Save” then select save as draft.

Then, click “Publish” to save the changes and make them live.
